aXTend™ RF

Simple. Powerful. Affordable.

It's Dynamics™ AX...where you want it.

Using RF technology with your Dynamics AX solution will multiply the speed and accuracy of your operation. How? By extending the power of Microsoft Dynamics AX to your shop floors, loading docks, production lines, warehouse... *wherever you need it most.*

What is aXTend RF?

The aXTend RF product is an extensible Dynamics AX data collection framework and middleware server that when combined with radio frequency technology can give you access to almost any functionality you have in your Dynamics AX application from a hand-held device.

How does aXTend RF help you?

Putting Dynamics AX in the hands of your managers frees them from the constraints of a desk and computer console. aXTend RF is the enabling tool that allows them to stay on top of the details behind your operations, make decisions quicker, and identify issues earlier. From warehouse management to logistics, your managers have the information they need to keep your operations running smoothly right in the palm of their hand.

aXTend RF gives you the functionality to create custom menus and screens enabling users with a straight-forward process and meaningful results to quickly and accurately complete their tasks. Whether it's determining quantity on hand, filling an order, or updating a job order, aXTend RF can help get the job done.

aXTend™ RF — Base Functionality

Sales Order

(Dynamics AX Trade license required)

- Create sales order and lines
- Sales order automatically posted
- Confirm sales order
- Pick (post list, update, get), Pack and Ship with and without paper-based picks
- Invoice sales order

Purchase Order

(Dynamics AX Trade license required)

- Create purchase orders and lines
- Purchase order (post, update, get)
- Receive against purchase order
- Update receipt list
- Set receive now quantity
- Invoice purchase order

Inventory Management

(Dynamics AX Logistics license required)

- Inventory queries on items and locations
- Inventory transfers
- Inventory P&L journal creation
- Inventory counting journals

Production Order

(Dynamics AX Production license required)

- Create, estimate, start, pick/issue, report as finished and end production orders
- Automatically post production orders

Fixed Assets

(Dynamics AX Fixed Assets license required)

- Track location of fixed assets

BUSINESS TECHNOLOGY SOLUTIONS

Technical Information

The core of aXTend RF is the aXTend terminal engine. This engine is the middleware that allows your personnel to communicate with Dynamics AX using wireless devices. The aXTend terminal engine loads your defined screens and menus when it starts up from a standard XML configuration file which you create using the aXTend RF Screen Builder inside Dynamics AX. Designed using Dynamics AX's Business Connector and the Microsoft .NET Framework, the aXTend terminal engine runs on Microsoft Windows as a service quietly starting every time your hardware boots up.

Functionality that Grows with You

aXTend RF comes with its standard functionality and is also highly customizable to address special requirements or situations. In addition to the default menus and screens, custom menus and screen layouts can quickly be developed using the aXTend RF Screen Builder inside Dynamics AX to arrange the menus and inputs to match your exact process. All business logic is programmed in Dynamics AX using the Dynamics AX development environment and the X++ language. This, coupled with an extensible code framework and the

aXTend Screen Builder, makes it possible to bring your particular processes to almost any RF-capable wireless device.

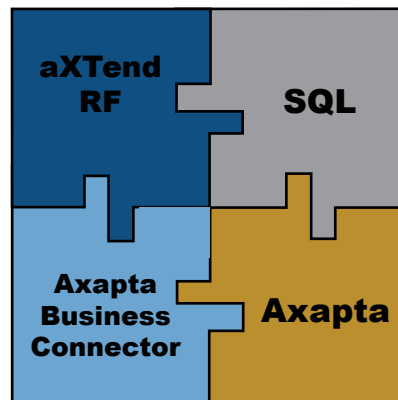

Hand-held Terminals

aXTend RF will function on any device capable of connecting to a TCP/IP server and that supports VT-220 terminal emulation. The aXTend RF interface is all textual allowing it to run fast on both newer and older hardware.

Connecting all the Pieces

aXTend RF is designed from the ground up exclusively for Dynamics AX by a team of experts with years of product experience going all the way back to its inception. We have taken our years of experience with Dynamics AX, SQL Server, and the Business Connector to provide a set of tools that leverages the products strengths along with your overall infrastructure while at the same time working to minimize the impact of some of its historical weaknesses to deliver a performance minded

highly usable application for you and your operators.
